Letter of reference

We would like to recommend the Datami Cyber-Security Company - the team of highly qualified, experienced, and certified ethical hackers.

They can:

1) carry out regular penetration tests and IT audits: networks, OS, services and software, Wi-Fi, databases, mobile applications (Android, iOS), and web applications;

2) give recommendations on how to eliminate the identified vulnerabilities according to the results of penetration tests;

3) install 24/7 protection on the resource, in which case there will be no reason to worry about external threats;

4) act as an ambulance in cases of hacking or DDos attacks;

5) reverse engineering of iOS / Android mobile applications.

We cooperated with the Datami company in the way we involved their Cybersecurity specialist in the project we had. They were helping us to make iOS/Android applications really secure. Datami company was cooperating with us and our developers in order to protect the application from all possible hazards it could have in the future. When the application was ready, we were satisfied by the cooperation with the cybersecurity team, they helped us a lot. Regarding the experience we had with the Datami Company we can recommend them for all

cybersecurity tasks. They will manage to deal with all tasks professionally and responsively.

Best regards,

General Manager, Head Of Development

Dmytro Tsurkan
